How to Enable Camera WDR/HLC/BLC/SSA
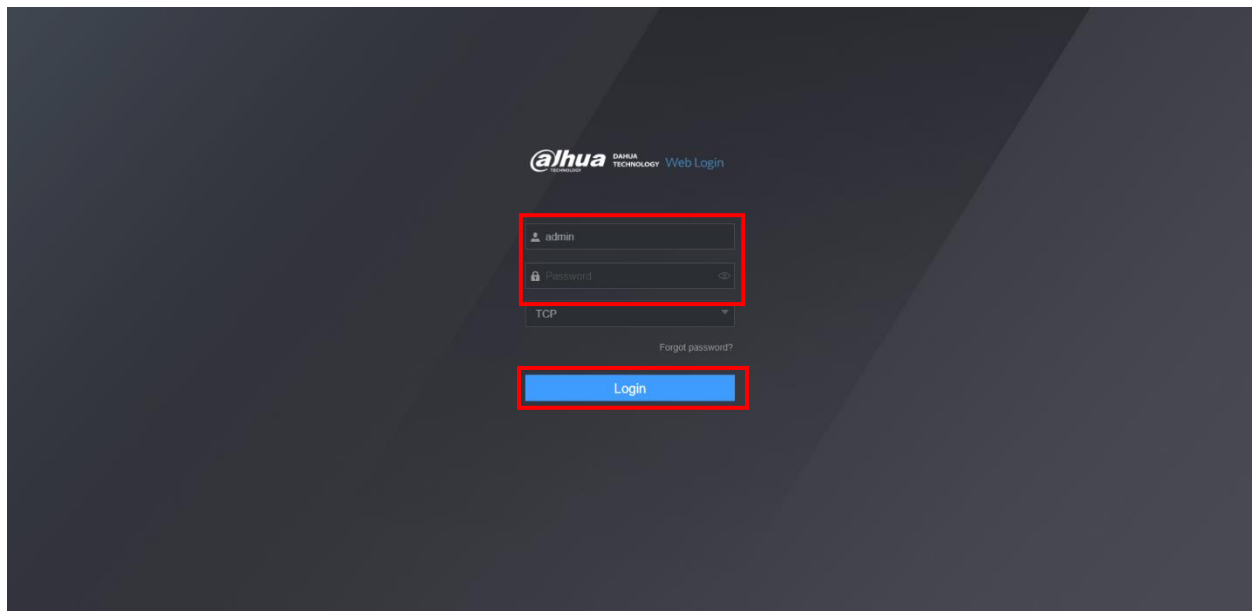

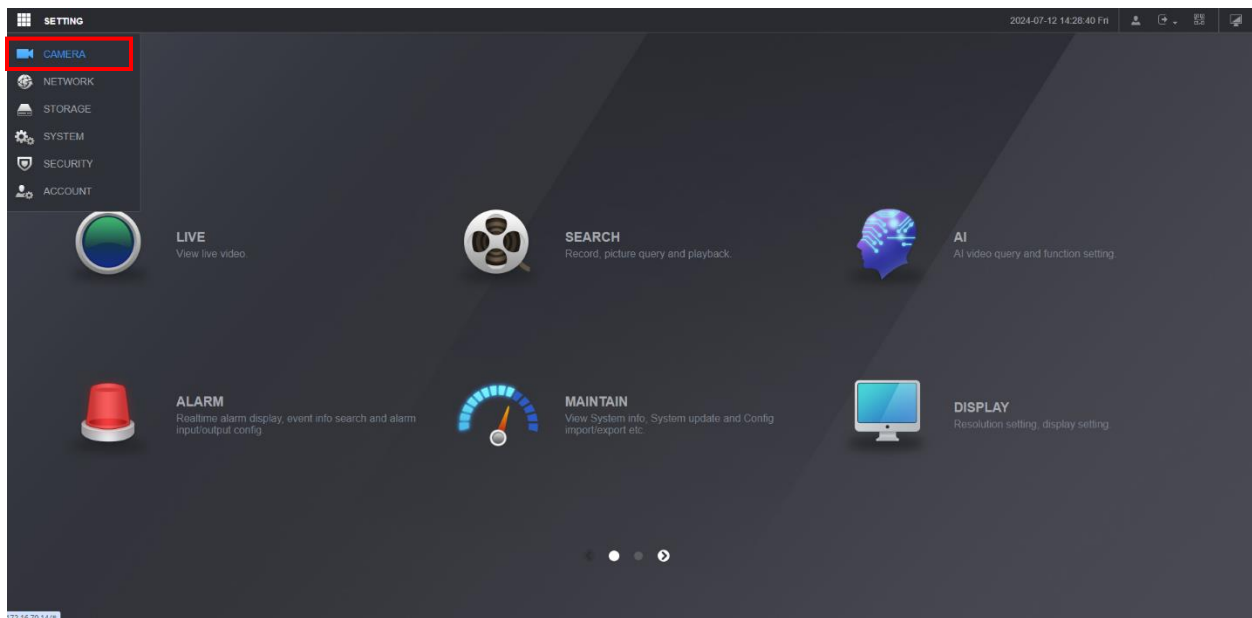

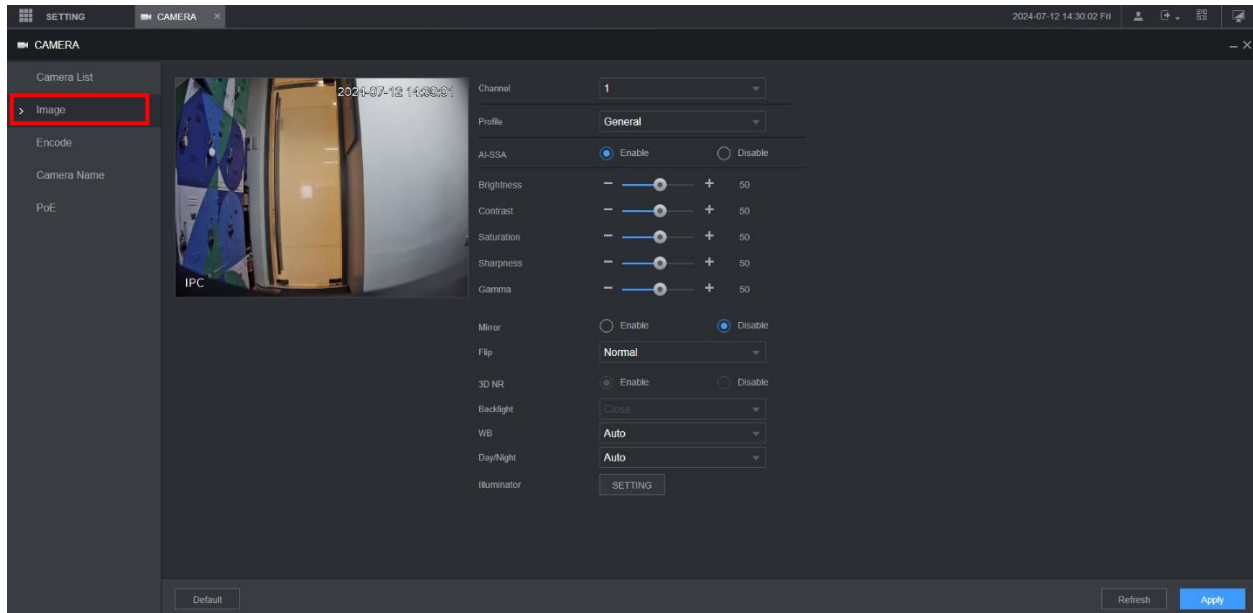

Login first on NVR Interface

At the upper left corner of the screen → click the **settings** and → select **Camera**

Under **camera tab** → select **Image**

If your camera has the AI-SSA function, it means it can automatically adjust the backlight. However, if you want to manually adjust the WDR, HLC, BLC, or SSA settings, disable the AI-SSA. Under the Backlight section, choose your preferred settings and click "Apply."
