AP Configuration by ProFi App

- Connect APs to PoE Switch or PoE injector

- Connect PoE Switch to Router

- Make sure the router is connected to Internet

- Connect mobile phone to the WiFi of Router or default WiFi of IP-COM AP (IP-COM_xxxx)

Wi-Fi SSID

Wi-Fi Key

Internet

Customer Office/Home

Router
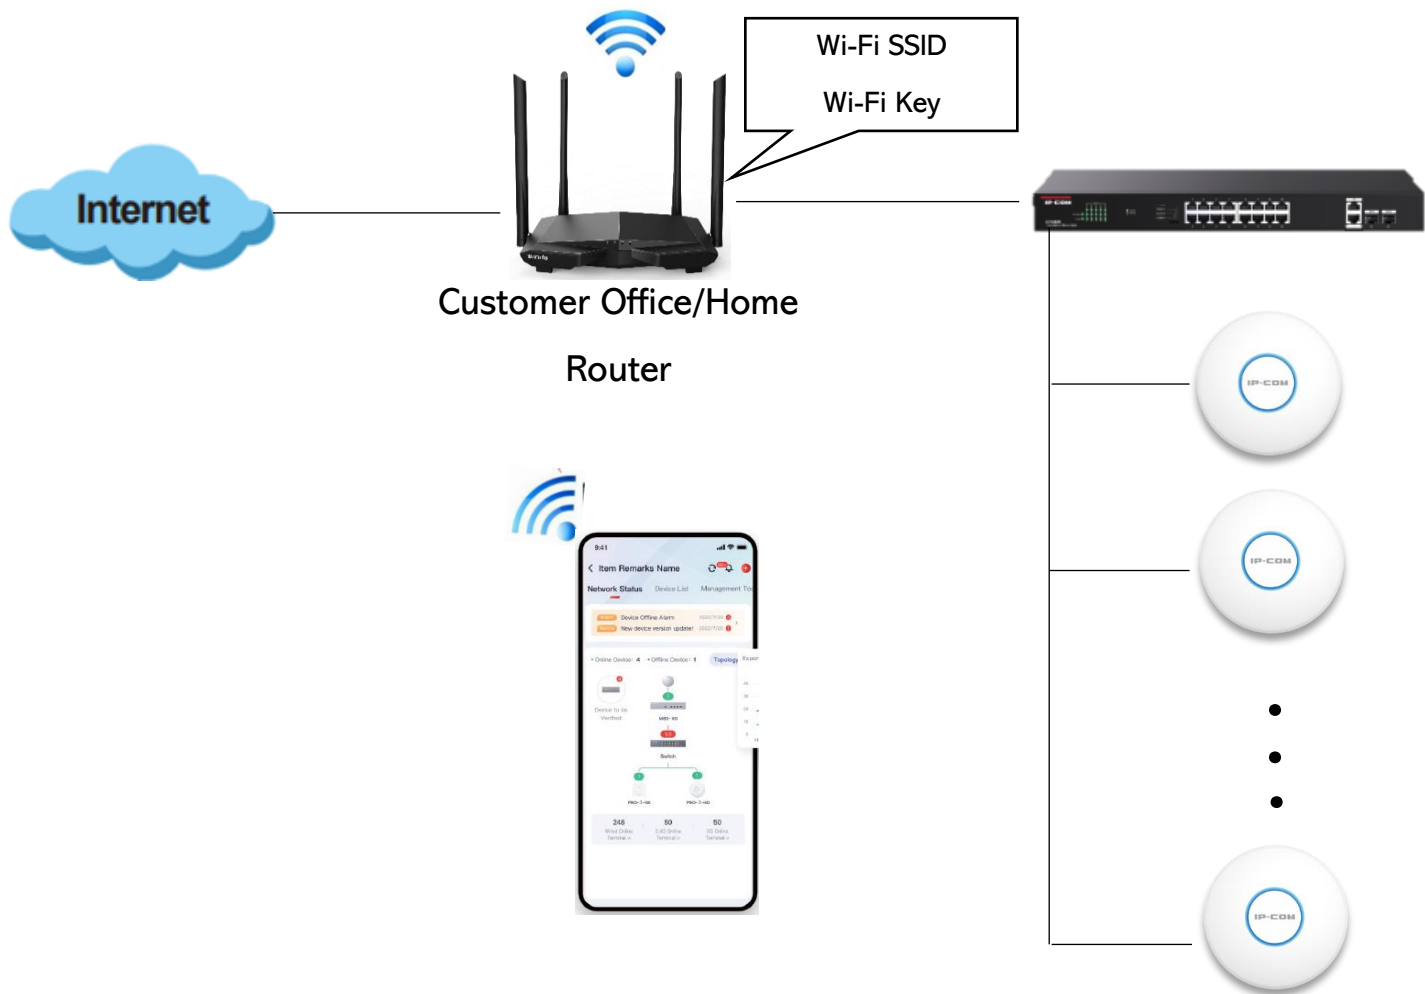

Click the Project section → then Select the **Create Project button**
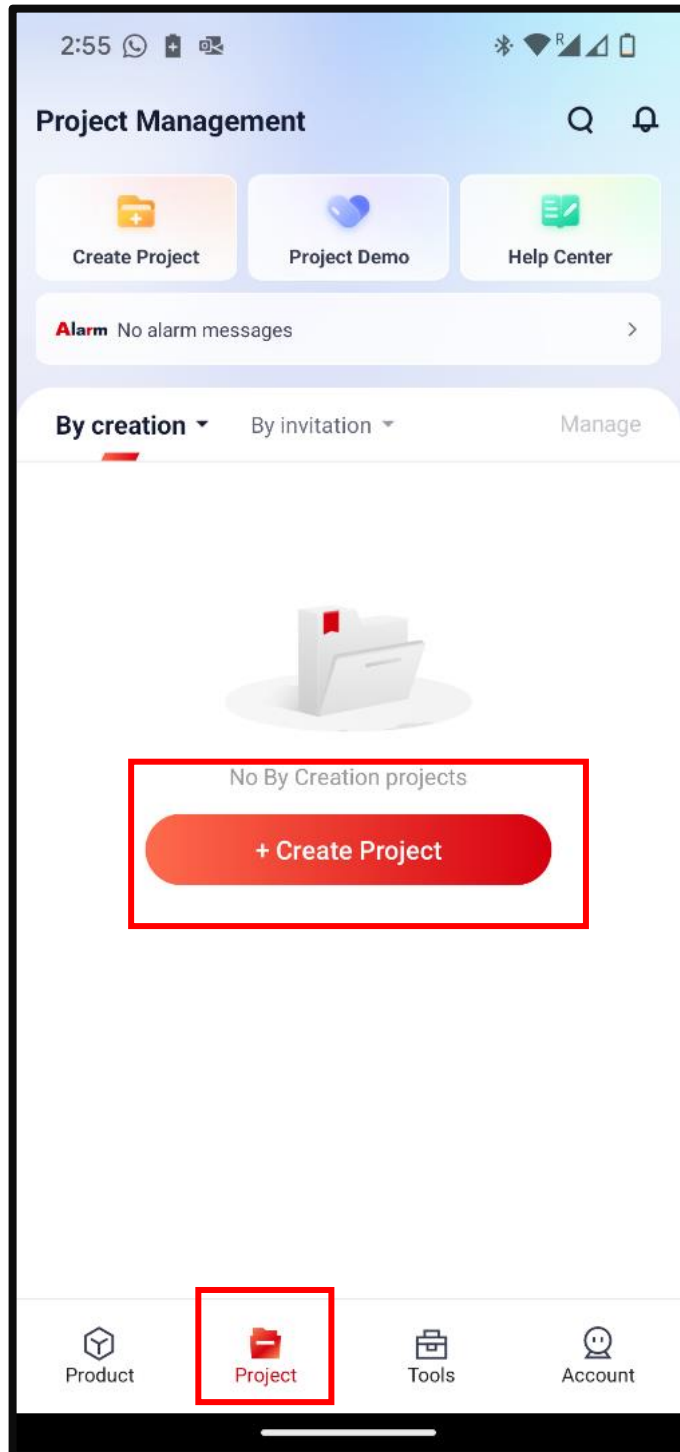

Input the details of the Project and then click **Save** button

On the Project you created, click the **Add device over Wi-Fi**

Wait until a device found during scanning

Select the device found, check the checkbox to **Agree** to enable cloud management and then click the **Add to Project** button

On the Project you created, click the **Configuration** section

On the configuration section click the **Wi-Fi Management**

Add the details you want for the AP, like the Wi-Fi name and Password then click **save** button and you can test the device.
